Sample Gas Company

D.P.U. 99-PGAF-SAMPLE · Peak Period Gas Adjustment Factor Filing, November 1, 2026 – April 30, 2027

Pursuant to 220 CMR 6.00, Sample Gas Company submits its proposed Peak Period Gas Adjustment Factor (PGAF). The proposed residential heating GAF is $0.9120 per therm, compared with $0.8455 per therm for the 2025-2026 peak period, an increase of $0.0665 per therm (7.9%). The increase is driven primarily by higher forecast commodity costs at the Algonquin citygate and a prior-period under-collection of $3,412,580.

Rate class	2025-26 GAF ($/therm)	Proposed 2026-27 GAF ($/therm)	Change
Residential heating (R-3)	0.8455	0.9120	+0.0665
Residential non-heating (R-1)	0.7710	0.8302	+0.0592
C&I high load factor (G-41)	0.8455	0.9120	+0.0665
C&I low load factor (G-51)	0.7710	0.8302	+0.0592

Schedule 2 – Cost of Gas Components

Total forecast peak-period cost of gas is $142,650,000, consisting of commodity costs of $98,300,000, pipeline and storage demand charges of $36,120,000, LNG peaking supply of $4,817,420, and the reconciliation adjustment of $3,412,580. Forecast peak-period sales are 156,410,000 therms.

Component	Amount ($)
Commodity	98,300,000
Pipeline & storage demand	36,120,000
LNG peaking	4,817,420
Prior-period reconciliation	3,412,580
Total	142,650,000

The Company also proposes a Local Distribution Adjustment Factor (LDAF) of $0.4310 per therm for residential customers effective November 1, 2026.
