SAMPLE DOCUMENT – fictional company and data, for demonstration only.

Sample Gas Company

D.P.U. 99-PGAF-SAMPLE · Responses to Information Requests

Information Request DPU-1-1

Request: Please explain the drivers of the projected increase in commodity costs.

Response: Commodity costs rise because the NYMEX strip for November 2026 through March 2027 averaged $4.12 per MMBtu at the time of filing, compared with $3.45 per MMBtu a year earlier, and Algonquin basis is forecast at $3.80 per MMBtu for December–February.

Information Request DPU-1-2

Request: Provide the calculation of the prior-period under-collection.

Response: The under-collection of $3,412,580 equals actual 2025-26 peak gas costs of $131,904,210 less GAF revenues of $128,491,630. See Attachment DPU-1-2 for monthly detail.

Information Request DPU-1-3

Request: Has the Company hedged any portion of its winter supply?

Response: Yes. The Company has fixed the price on 28% of forecast winter purchases through financial hedges at a weighted average of $3.95 per MMBtu, consistent with its approved hedging plan.

Information Request AG-1-1

Request: What is the bill impact for a typical residential heating customer?

Response: A typical residential heating customer using 120 therms in January would see a bill increase of $7.98 (from $283.41 to $291.39), or 2.8%.
